

ShoreClean[™]

Oil Spill Bioremediation Products and Services

- ◆ Green
- ◆ Natural
- ◆ Regenerative
- ◆ Proven technology

ShoreClean is a safe and natural solution for effectively cleaning oil spill contamination from aquatic environments. When ShoreClean bags or booms are properly implemented, flowing water or wave action releases oil-degrading microbes and nutrients to stimulate oil degradation. ShoreClean booms contain a natural oleophilic and hydrophobic sorbent capable of absorbing 8 times their weight in oil.

- ◆ EnSolve is available for on-site service and implementation

This biotechnology approach was proven effective in combating the Exxon Valdez oil spill as supported by EPA and US Coast Guard Studies, and has been further enhanced by EnSolve in creating the ShoreClean product.

ShoreClean Bags

ShoreClean Booms

The rate of oil degradation is dependent upon environmental factors including the amount of oil present, weather and water conditions, soil type, pH, and dissolved oxygen content.
